

EXPERIMENT 05a

Insurance Claim — Report Types

Aim. Create nine insurance-claim report representations using Claim_Request_Form and demonstrate their saved configuration and interactions.

Application: Insurance Claim Management

Record: Actual Zoho Creator screenshots captured on 06-07 Oct 2026. Sample claimants and policy details are fictional.

Evidence scope. This record describes the saved configuration and captured results. Any missing reference requirement is stated explicitly.

Report type selection

The report picker in this account offers List, Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot Table and Pivot Chart. The ninth requested representation, the amount summary, is implemented with Pivot Table aggregations.

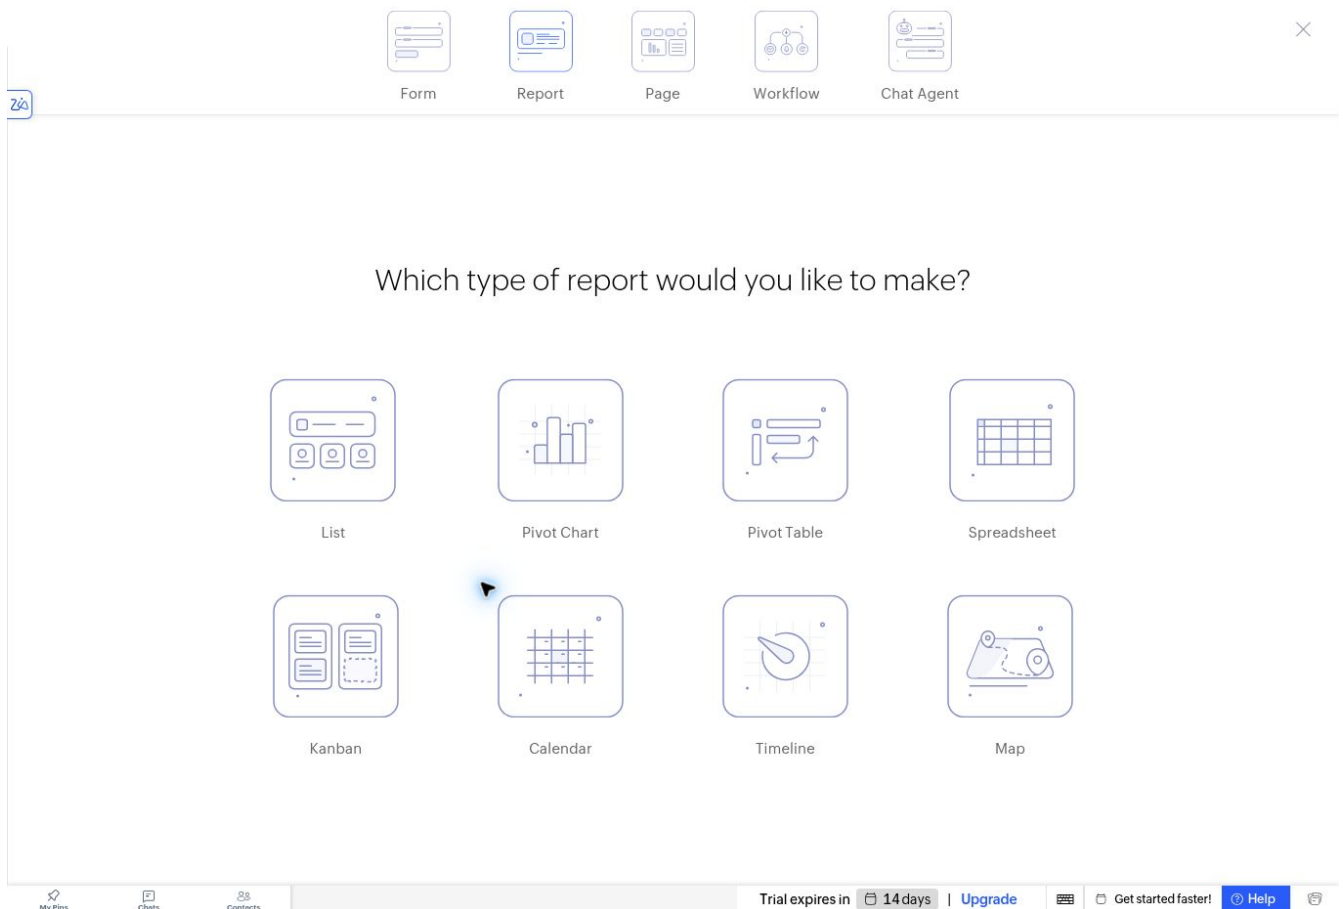

Figure 1. Native report type selector; a separate Summary type is absent.

List report

All_Claims_List displays claimant name, policy number, claim type, requested amount and status. Incident dates are sorted descending. Quick filters are configured for Claim Type, Status and Claimant Type.

Claimant Name	Policy Number	Claim Type	Claim Amount Requested	Status
Dev Menon	DEMO-POL-1001	Motor	38000	Submitted
Ananya Rao	DEMO-POL-1001	Motor	40000	Submitted
Rohan Das	DEMO-PROPERTY-1003	Property	45000	
Meera Shah	DEMO-HEALTH-1002	Health	18000	
Aarav Kumar	DEMO-MOTOR-1001	Motor	25000	

Figure 2. Five saved fictional claims and configured quick filters, captured before the Kanban test.

Spreadsheet report

Claims_Spreadsheet has Claim Type filtering. The form contains scripted input workflows, so its current browser output is a list-style fallback rather than an editable spreadsheet grid. This limitation is documented by Zoho Creator.

Claims Spreadsheet

Claimant Name	Claimant Type	Policy Number	Email Address	Contact Number	Residential Address
Dev Menon	Policyholder	DEMO-POL-1001	dev.demo@example.com	+919000000005	
Ananya Rao	Policyholder	DEMO-POL-1001	ananya.demo@example.com	+919000000004	
Rohan Das	Third Party	DEMO-PROPERTY-1003	rohan.demo@example.com	+919000000003	Madurai, Tamil Nadu, 625001,
Meera Shah	Nominee	DEMO-HEALTH-1002	meera.demo@example.com	+919000000002	Coimbatore, Tamil Nadu, 6410
Aarav Kumar	Policyholder	DEMO-MOTOR-1001	aarav.demo@example.com	+919000000001	Demo Street 1, Chennai, Tamil Na 600001

Showing 5 of 5

Figure 3. Actual saved report output. Claim-type grouping, three-column-only editing and Claims Processing Team permissions are not implemented.

Kanban: before movement

Claim_Status_Kanban groups records by Status and shows claimant name and claim type. The five stages are Submitted, Under Investigation, Approved, Settled and Rejected. Before the interaction, Dev Menon and Ananya Rao appear in Submitted.

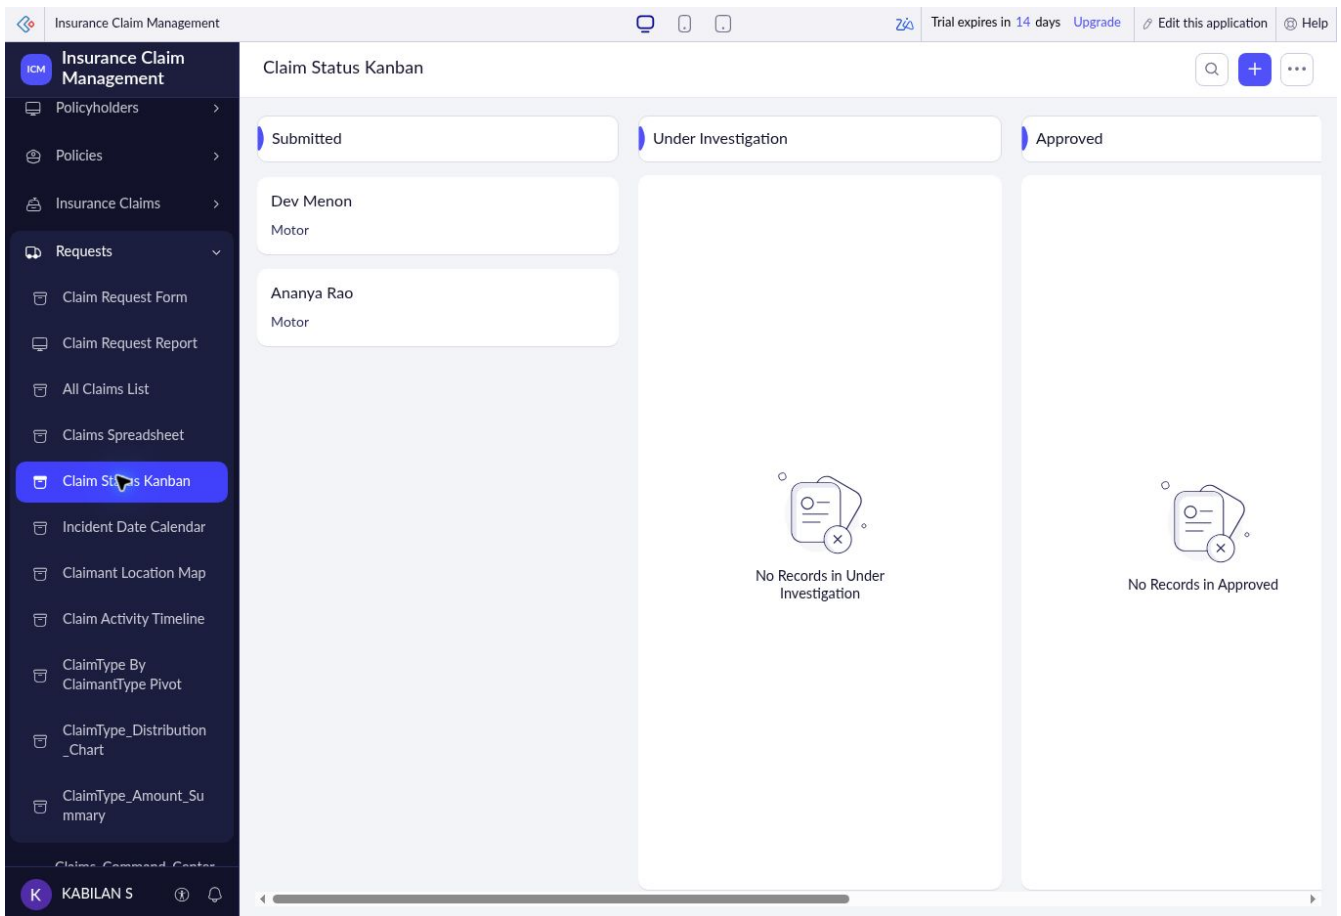

Figure 4. Before: both advanced samples are in Submitted; the original three samples have blank status.

Kanban: after movement

Drag the fictional Dev Menon card from Submitted to Under Investigation. The card moves to the destination stage. Reloading the report confirms that the changed status persists.

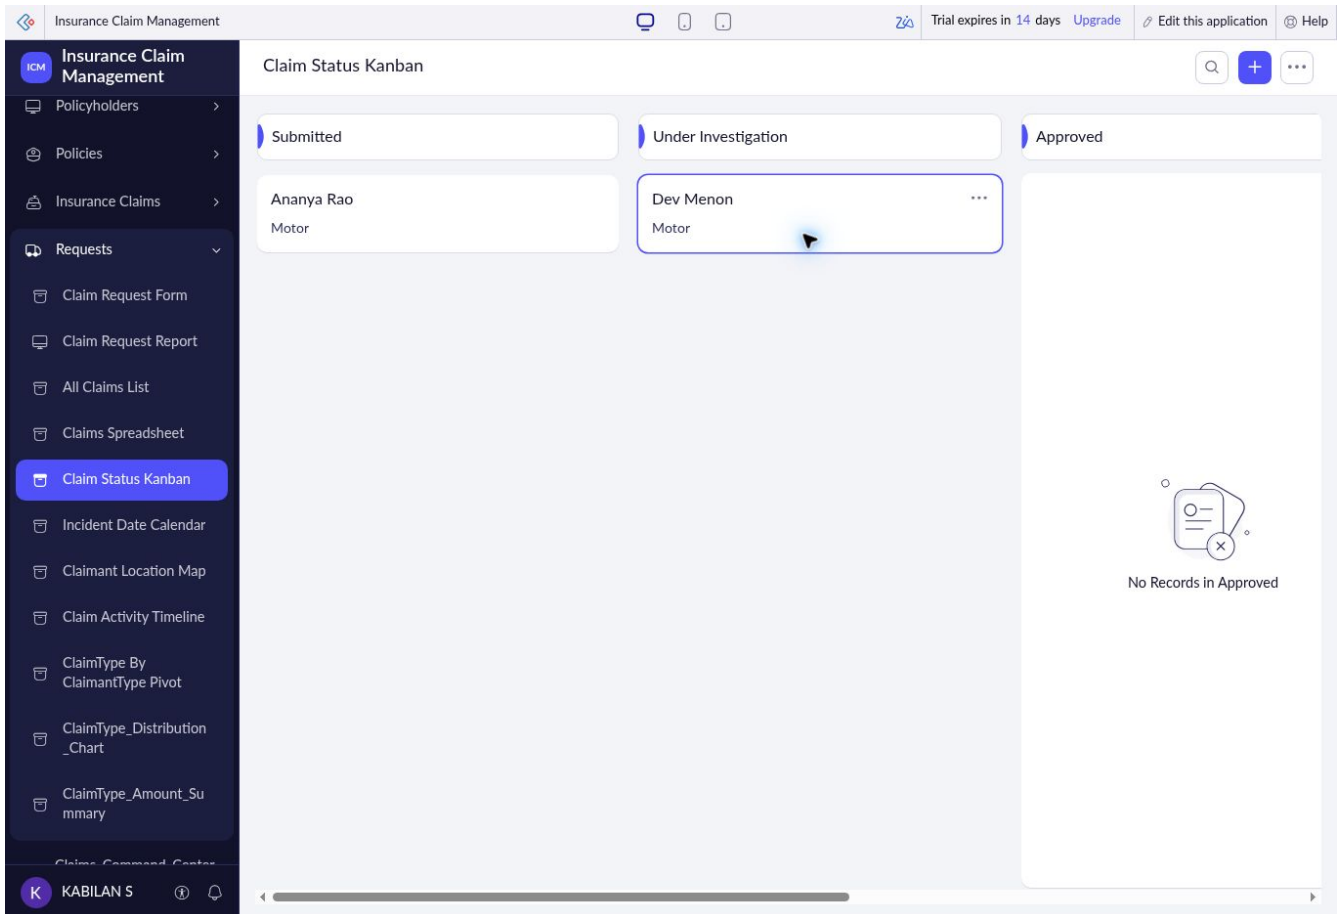

Figure 5. After: Dev Menon is in Under Investigation; Ananya Rao remains Submitted.

Automatic status-change timestamp

Open the moved card and inspect its saved details. Status is Under Investigation and Status Changed On is 07-Oct-2026 00:13:17. The existing validation workflow assigns the timestamp automatically during the move.

The screenshot displays the Insurance Claim Management (ICM) application interface. On the left is a dark sidebar with a menu containing items like Policyholders, Policies, Insurance Claims, Requests, and various reports. The main area is titled 'Claim Status Kanban' and shows a board with columns for Submitted, Under Investigation, Approved, Settled, and Rejected. The 'Under Investigation' column is active, showing a card for 'Dev Menon' with a 'Motor' incident type. To the right of the kanban board is a detailed record panel for this claim. It contains a table of fields and their values, including 'Incident Voice Statement' (a file), 'Is Third Party Involved' (true), 'Estimated Repair Cost' (₹ 38,000.00), 'Depreciation Percent' (20.00), 'Policy Deductible' (₹ 1,000.00), 'Net Payable Amount' (29400.00), 'Claim Process Guidelines Display' (a text block), 'Claimant Digital Signature' (a signature), 'Claim Submitted On' (06-Oct-2026 20:30:24), 'Claim Reference ID' (5), 'Claim Reference Code' (INS-CLM-2026-000005), 'Claim Tracking QR Code' (a QR code), 'Status' (Under Investigation), 'Investigation Status' (Not Started), 'Surveyor Assigned' (empty), 'Settlement Status' (Pending), and 'Status Changed On' (07-Oct-2026 00:13:17). The 'Status Changed On' field is highlighted with a mouse cursor. At the bottom of the record panel is an 'Add a comment' button. The top of the application shows a header with 'Insurance Claim Management', user avatars, and a trial expiration notice.

Field	Value
Incident Voice Statement	lab-audio-test.mp3
Is Third Party Involved	true
Estimated Repair Cost	₹ 38,000.00
Depreciation Percent	20.00
Policy Deductible	₹ 1,000.00
Net Payable Amount	29400.00
Claim Process Guidelines Display	Keep all original bills and estimates. A surveyor will contact you within 48 hours. Do not repair the vehicle before inspection.
Claimant Digital Signature	[Signature]
Claim Submitted On	06-Oct-2026 20:30:24
Claim Reference ID	5
Claim Reference Code	INS-CLM-2026-000005
Claim Tracking QR Code	[QR Code]
Status	Under Investigation
Investigation Status	Not Started
Surveyor Assigned	
Settlement Status	Pending
Status Changed On	07-Oct-2026 00:13:17

Figure 6. Verified persisted status and timestamp from the native record detail panel. No real claim decision was made.

Calendar report

Incident_Date_Calendar uses Date of Incident as the event date and claimant name as the title. Five sample events appear across 1-5 October 2026.

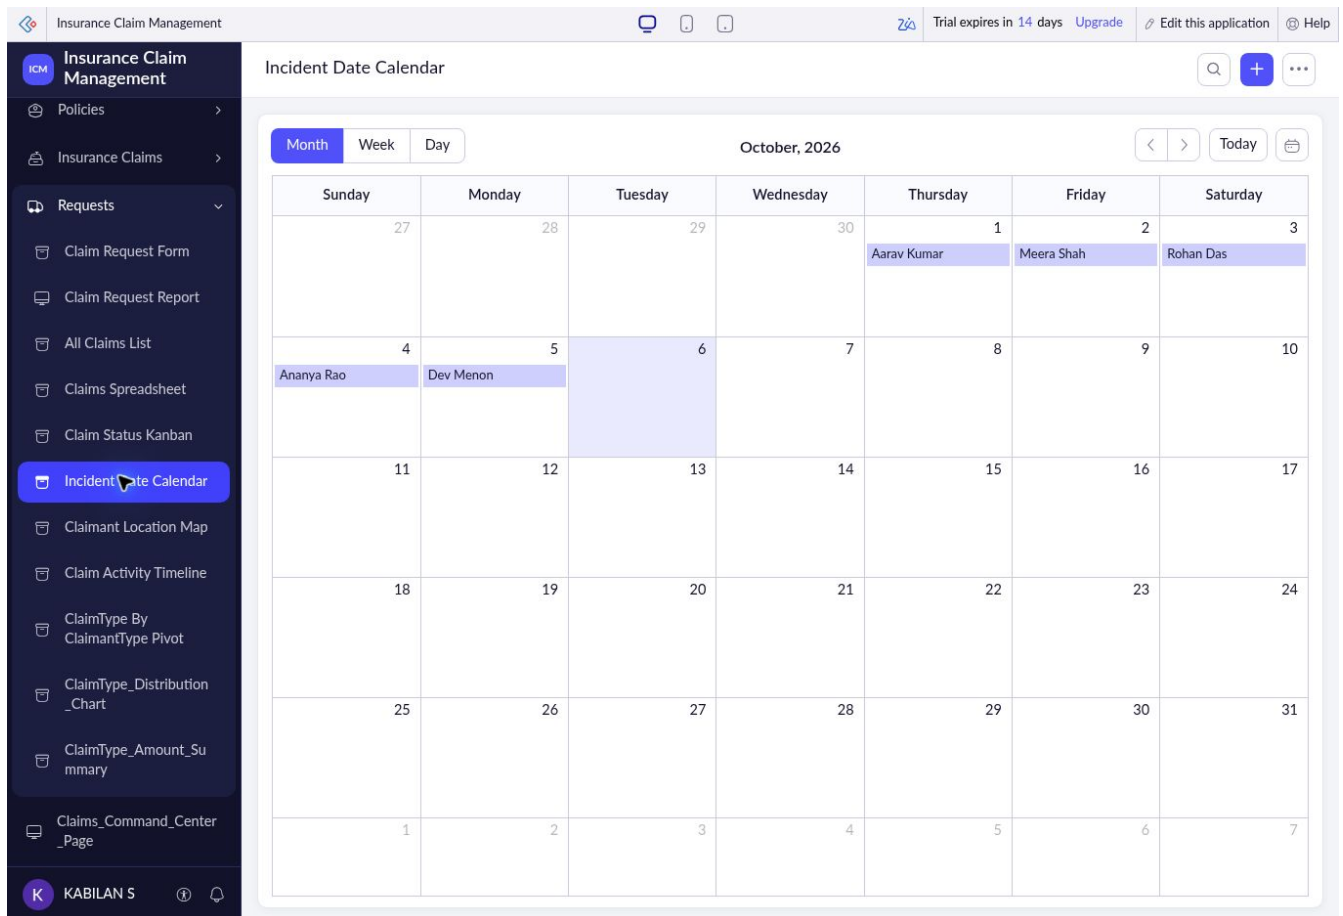

Figure 7. Actual October calendar with all five fictional claims. A policy-period exclusion filter is not configured.

Calendar event interaction

Click the Dev Menon event on 5 October. Zoho opens the corresponding claim detail view, showing the same claimant and incident date. This verifies event-to-record navigation.

Figure 8. Native claim details opened from the calendar event. A date-to-list drilldown is not separately configured.

Map report

Claimant_Location_Map uses Residential Address as its source. Coordinate capture is enabled in the address field, but saved sample coordinates and functioning pins have not been verified.

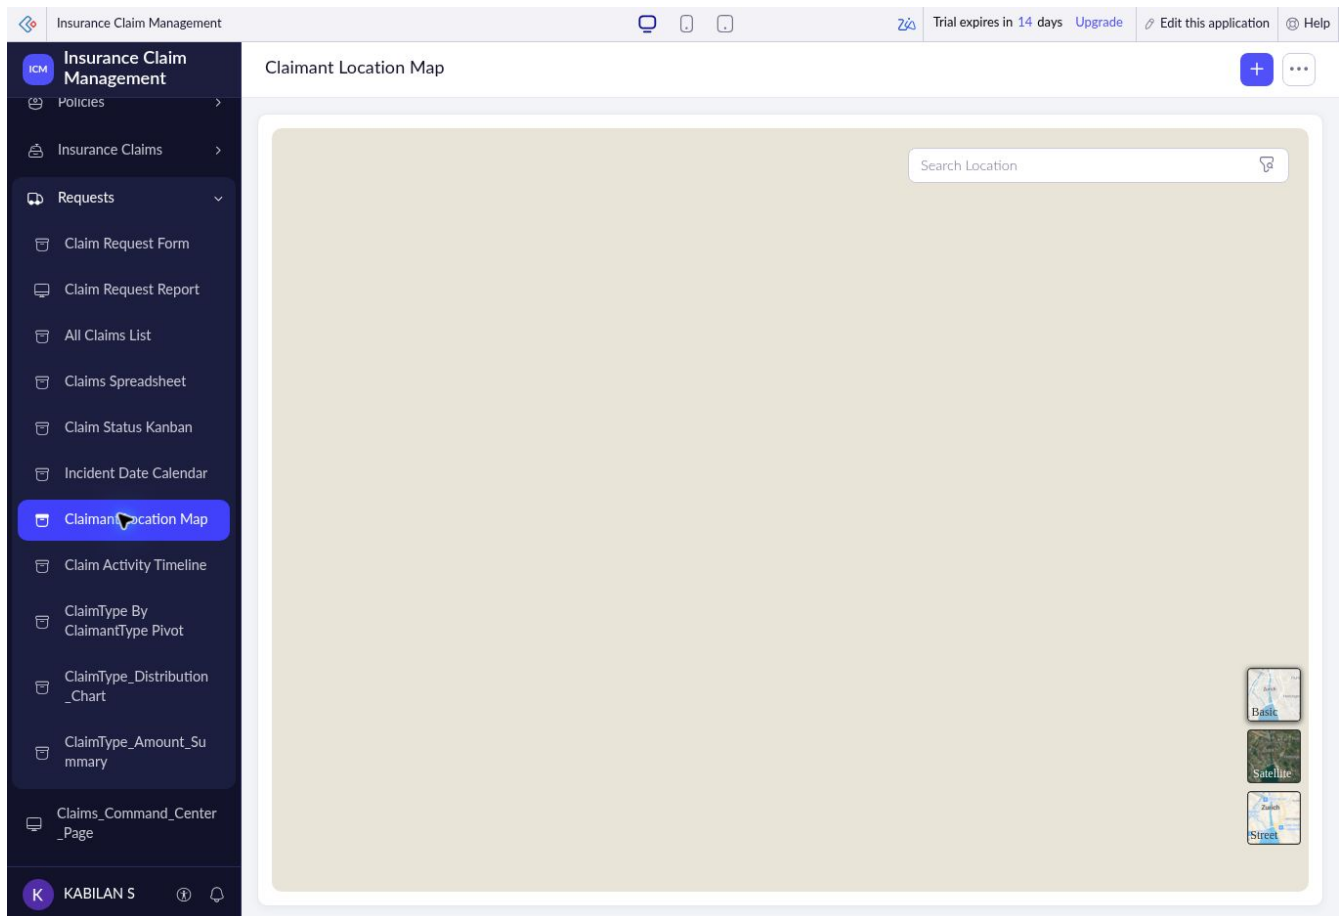

Figure 9. Actual map output is blank: tiles and claim pins are not rendered. Claim-type pin colours are not configured.

Timeline report

Claim_Activity_Timeline uses Claim Submitted On. The weekly timeline displays the two advanced samples with populated submission timestamps. The original three samples have no submission timestamp.

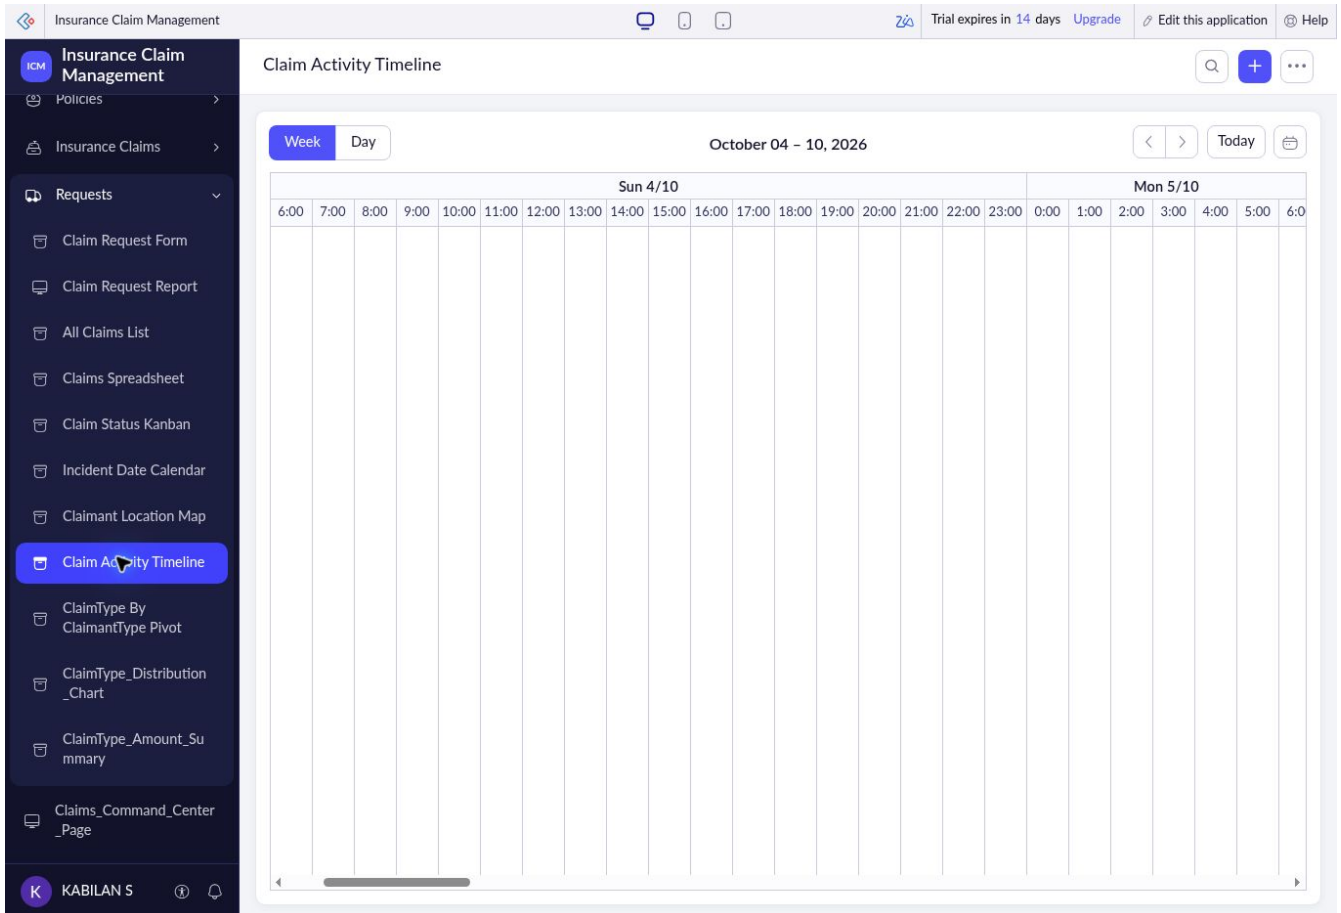

Figure 10. Native record timeline. A cumulative claims series and scheduled daily refresh are not implemented.

Pivot table

ClaimType_By_ClaimantType_Pivot uses Claim Type as rows, Claimant Type as columns and Count of Policy Number as data. Policy Number is required, so its count represents the number of saved claims.

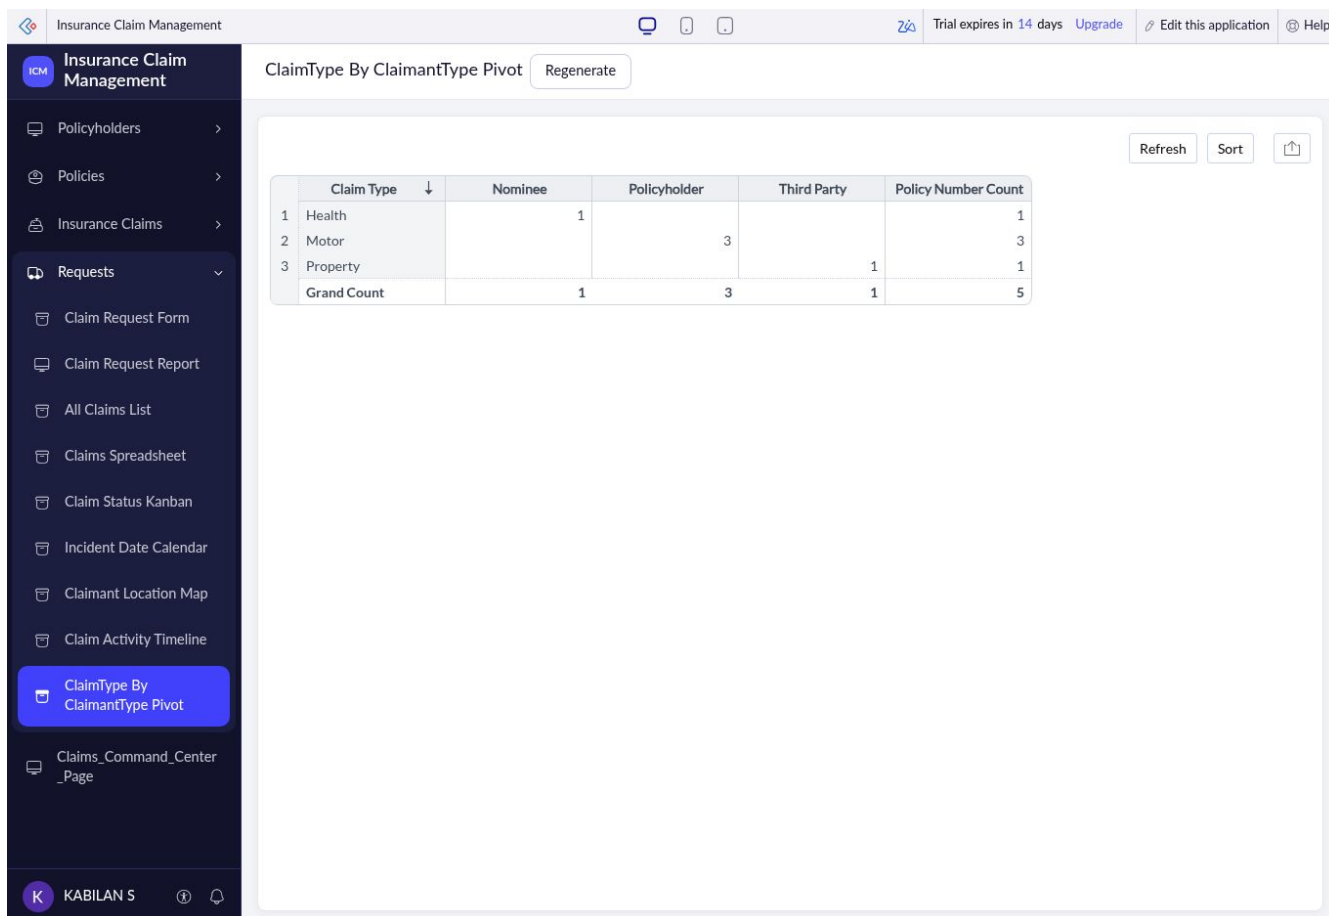

Figure 11. Motor/Policyholder = 3, Health/Nominee = 1, Property/Third Party = 1; grand total = 5. Empty intersections remain blank.

Pie chart

ClaimType_Distribution_Chart uses Claim Type as the category and Count of Policy Number as the measure, with the native pie display selected.

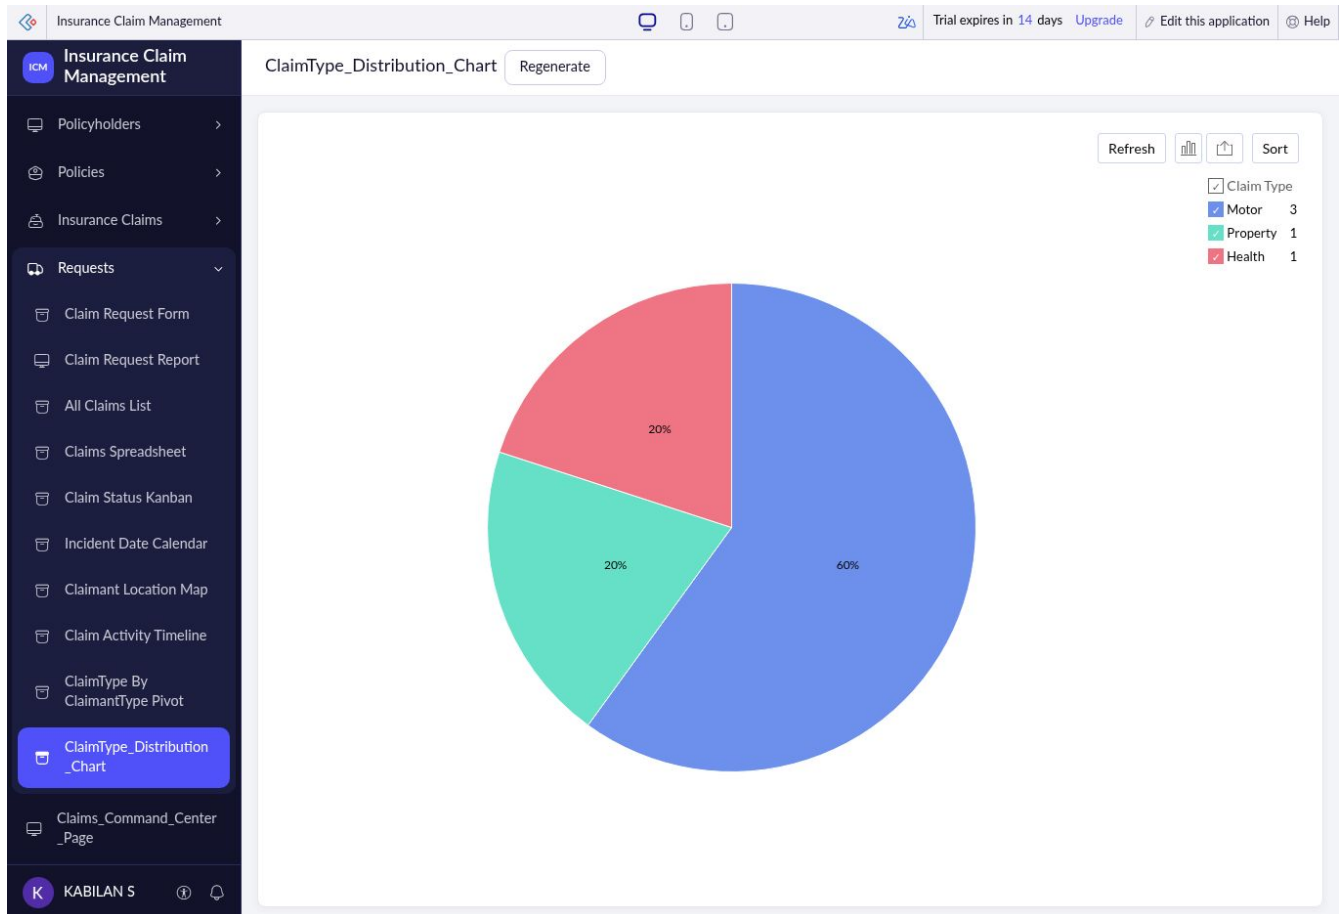

Figure 12. Motor = 60%, Health = 20%, Property = 20%, from five saved claims. Submission-triggered automatic refresh has not been tested or configured.

Amount summary

ClaimType_Amount_Summary groups by Claim Type and calculates Count of Policy Number, Sum of Claim Amount Requested and Average of Claim Amount Requested. Requested amounts are recorded in INR. The current numeric totals lack the requested currency symbol and two-decimal formatting.

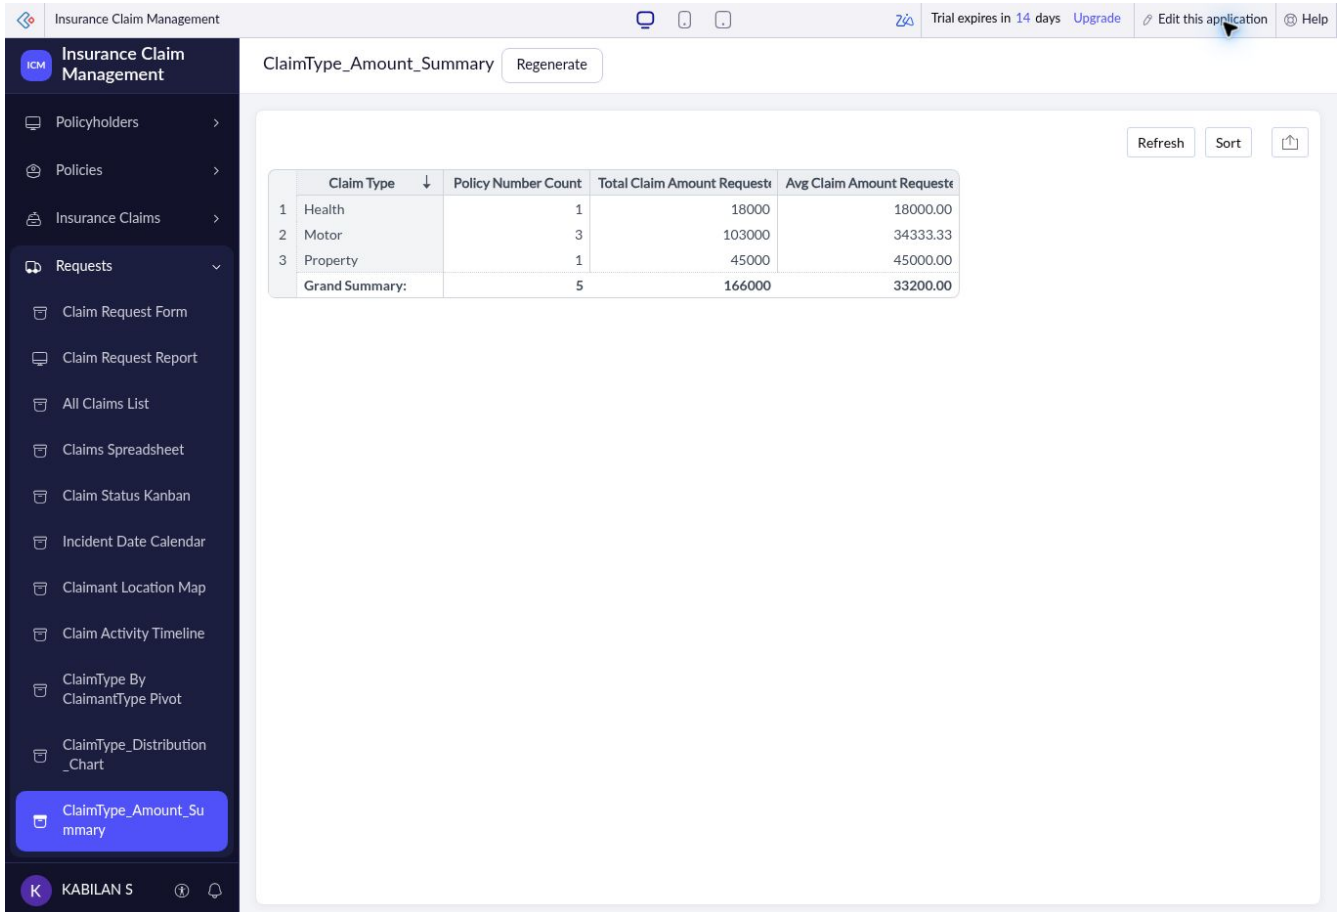

Figure 13. Health: 1 / 18000 / 18000.00; Motor: 3 / 103000 / 34333.33; Property: 1 / 45000 / 45000.00. Total: 5 / 166000 / 33200.00.

Verification and remaining work

Verified result. Nine named report representations are saved. Native evidence verifies the list filters and sorting, status-based Kanban, persisted card movement with automatic timestamp, incident-date calendar and event navigation, claim-type/claimant-type pivot, pie distribution and count/sum/average summary.

Implementation difference. The native picker provides eight report types. The ninth requested summary is implemented through a Pivot Table. The spreadsheet currently renders as a list fallback because the source form has scripted input workflows; its restricted inline editing is not demonstrated.

Outstanding requirements. Spreadsheet grouping and Claims Processing Team edit restrictions; calendar policy-period exclusion and date-to-list drilldown; geocoded map pins and claim-type colours; cumulative timeline and daily refresh; pivot zero-fill; new-submission chart auto-refresh; INR symbol and two-decimal summary totals; individual report-type configuration screenshots for every report.

Submission status. This is an updated evidence record, not full compliance with the supplied reference. Unverified or missing behaviour is stated beside the relevant screenshot. Existing screenshots from 6 October and interaction screenshots from 7 October are preserved without altering their UI content.
