

EXPERIMENT 04a

Insurance Claim Request Form — Basic Fields

Aim. Design an insurance claim intake form in Zoho Creator using all thirteen basic field types, apply input validation, and verify submitted requests in a list report.

Application: Insurance Claim Management

Form: Claim_Request_Form

Report: Claim Request Report (link name: All_Requests)

Basic field type	Claim form field
Name	Claimant Name
Email	Email Address
Address	Residential Address
Phone	Contact Number
Single Line	Policy Number
Multi Line	Incident Description
Number	Claim Amount Requested
Date	Date of Incident
Time	Preferred Callback Time
Drop Down	Claim Type
Radio	Claimant Type
Multi Select	Supporting Documents Available
Checkbox	Declaration of Authenticity

The intake is arranged into claimant information, contact information, claim details, and scheduling/declaration. The same form was later extended for the advanced-fields exercise.

1. Form design

Create Claim_Request_Form and add the basic fields. Configure claimant categories as Policyholder, Nominee and Third Party. Use Motor, Health, Life and Property as claim categories. Mark the required identity, policy, phone, category, incident date, amount and declaration inputs as mandatory.

The screenshot displays the Zoho Build Agent interface for creating a 'Claim Request Form'. The top navigation bar includes the app name, a search icon, a plus icon, and a 'Done' button. The left sidebar shows a 'Build Agent' section with a 'Data Model Creation Failed' message and a 'Policyholder' section containing detailed instructions for building the insurance claim data model. The main workspace shows a form with the following fields: 'Claimant Name' (text, required), 'Claimant Type' (dropdown, required, highlighted with a dashed border), 'Policy Number' (text, required), 'Email Address' (text), 'Contact Number' (text, required), 'Residential Address' (text), 'Claim Type' (dropdown, required), 'Date Of Incident' (date, required), 'Claim Amount Requested' (text, required), 'Supporting Documents Available' (checkbox), 'Incident Description' (text), and 'Preferred Callback Time' (text). The right sidebar shows the 'Field Properties' for the 'Claimant Type' field, including 'Field name' (Claimant Type), 'Field link name' (Claimant_Type), 'View Field References', 'Choices' (Policyholder, Nominee, Third Party), 'Alphabetical Order', 'Allow Other Choice', 'Validation' (Mandatory), and 'Data Privacy' (Contains personal data).

Figure 1. Actual Form Builder showing the basic field controls and mandatory claimant category. The left-hand Build Agent message belongs to an earlier failed attempt; the saved form was built manually.

2. Claimant and contact information

Open the live form and enter a fictional request. The Name field exposes first and last name; Phone uses the Indian +91 country code; Address exposes city, state, postal code and country. Email uses native format validation.

The screenshot displays the 'Insurance Claim Management' (ICM) web application interface. The top navigation bar includes the application name, user profile, and utility links like 'Trial expires in 14 days', 'Upgrade', 'Edit this application', and 'Help'. A dark sidebar on the left contains a menu with options: 'Policyholders', 'Policies', 'Insurance Claims', 'Requests' (expanded), 'Claim Request Form' (highlighted), and 'All Requests'. The main content area is titled 'Claim Request Form' and contains the following fields:

- Claimant Name ***: Split into 'First Name' (Rohan) and 'Last Name' (Das).
- Claimant Type ***: Radio buttons for 'Policyholder', 'Nominee', and 'Third Party' (selected).
- Policy Number ***: Text input with value 'DEMO-PROPERTY-1003'.
- Email Address**: Text input with value 'rohan.demo@example.com'.
- Contact Number ***: Text input with a country code dropdown set to '+91' and the number '9000000003'.
- Residential Address**: Multiple text inputs for 'Address Line 1', 'Address Line 2', 'City / District' (Madurai), 'State / Province' (Tamil Nadu), 'Postal Code' (625001), and 'Country' (India).
- Claim Type ***: Dropdown menu set to 'Property'.
- Date Of Incident ***: Text input with value '03-Oct-2026'.
- Claim Amount Requested ***: Text input with value '45000'.

At the bottom, a section for 'Supporting Documents Available' is partially visible.

Figure 2. Live form with fictional claimant Rohan Das and a property insurance request.

3. Claim details and declaration

Enter the incident date and requested amount, record a description, and select any supporting documents available. The optional callback Time field supports scheduling. The declaration is a mandatory checkbox.

The screenshot displays the 'Claim Request Form' within the 'Insurance Claim Management' application. The interface features a dark sidebar with navigation options: Policyholders, Policies, Insurance Claims, Requests (expanded), Claim Request Form (selected), and All Requests. The main form area contains the following fields and controls:

- Residential Address:** Includes input fields for Address Line 1, Address Line 2, City / District (Madurai), State / Province (Tamil Nadu), Postal Code (625001), and Country (India).
- Claim Type:** A dropdown menu set to 'Property'.
- Date Of Incident:** A date picker showing '03-Oct-2026'.
- Claim Amount Requested:** A numeric input field containing '45000'.
- Supporting Documents Available:** A dropdown menu set to '-Select-'.
- Incident Description:** A text area containing the text: 'Fictional property claim for storm damage in a lab demonstration.'
- Preferred Callback Time:** A time picker showing 'HH:mm:ss'.
- Is Third Party Involved:** An unchecked checkbox.
- Declaration Of Authenticity:** A mandatory checkbox with the text 'I confirm that the information provided is true and accurate'.
- Submit Claim:** A blue button at the bottom of the form.

The top of the application shows a header with the 'Insurance Claim Management' title, user avatars, and utility links: 'Trial expires in 14 days', 'Upgrade', 'Edit this application', and 'Help'.

Figure 3. Actual lower portion of the basic intake before submission, including incident description, callback time and authenticity declaration.

4. Validation workflow

Save Validate_Claim_Request for created or edited records, triggered during validation on form submission. The script rejects non-positive claim amounts and future incident dates. Native mandatory and format rules complement these checks. The extra percentage/cost checks support the subsequent advanced exercise.

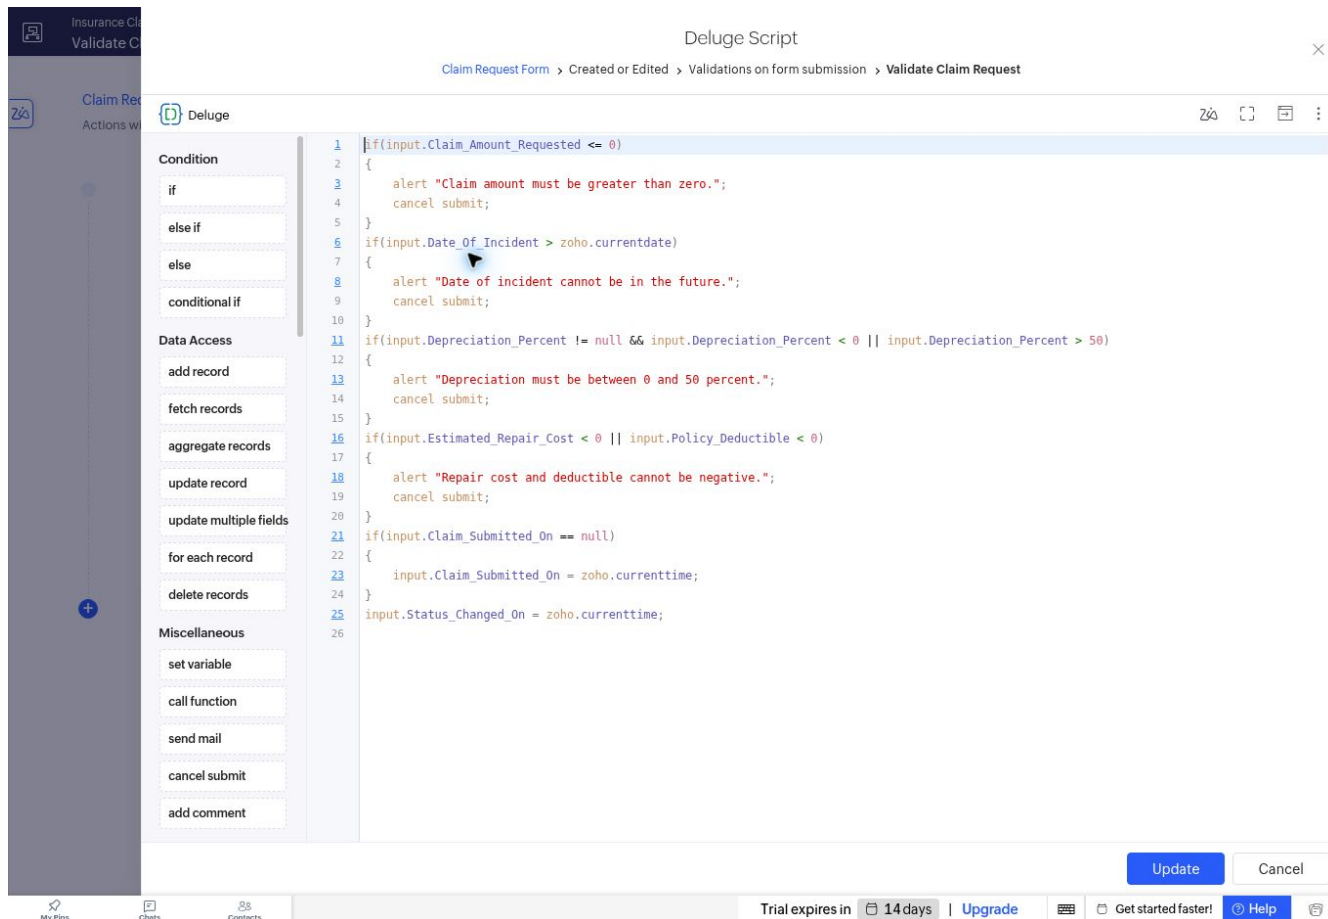

Figure 4. Saved Deluge validation action reopened in Zoho Creator. The positive-amount and no-future-date rules appear at the top of the script.

5. Submitted records and report

Submit the sample requests and open Claim Request Report. The report contains Aarav Kumar, Meera Shah and Rohan Das, covering policyholder, nominee and third-party categories, plus Ananya Rao and Dev Menon from the advanced-field tests. All five are fictional laboratory records.

Claimant Name	Policy Number	Claimant Type	Claim Type	Date of Incident	Claim Amount Requested	Status	CI
Dev Menon	DEMO-POL-1001	Policyholder	Motor	05-Oct-2026	38000	Submitted	IN
Ananya Rao	DEMO-POL-1001	Policyholder	Motor	04-Oct-2026	40000	Submitted	IN
Rohan Das	DEMO-PROPERTY-1003	Third Party	Property	03-Oct-2026	18000	Submitted	IN
Meera Shah	DEMO-HEALTH-1002	Nominee	Health	02-Oct-2026	25000	Submitted	IN
Aarav Kumar	DEMO-MOTOR-1001	Policyholder	Motor	01-Oct-2026	25000	Submitted	IN

Figure 5. Current native report showing five saved records, exceeding the three-sample requirement. Additional tracking columns are available by horizontal scrolling.

6. Filter by category and requested amount

Open Advanced Search, select Claim Type and Claim Amount Requested, then apply Motor and 38000. The combined search returns only Dev Menon. Remove the temporary search changes after verification to restore all five records.

The screenshot displays the Insurance Claim Management (ICM) application interface. The top navigation bar includes the ICM logo, a title bar, and utility links like 'Trial expires in 14 days', 'Upgrade', 'Edit this application', and 'Help'. The left sidebar contains a menu with options: Policyholders, Policies, Insurance Claims, Requests (selected), Claim Request Form, Claim Request Report (highlighted), All Claims List, Claims Spreadsheet, Claim Status Kanban, Incident Date Calendar, Claimant Location Map, Claim Activity Timeline, ClaimType By ClaimantType Pivot, and Claims_Command_Center_Page. The main content area is titled 'Claim Request Report' and features a search bar with two filters: 'Claim Type contains "Motor"' and 'Claim Amount Requested is "38000"'. Below the search bar, a table lists search results. The first row shows a claimant named 'Dev Menon' with policy number 'DEMO-POL-1001', claimant type 'Policyholder', claim type 'Motor', date of incident '05-Oct-2026', claim amount requested '38000', status 'Submitted', and claim number 'INS-1'. A dropdown menu is open over the 'Claim Type' column, showing options: Health, Life, and Property. The bottom status bar indicates 'Showing 1 of 1'.

Claimant Name	Policy Number	Claimant Type	Claim Type	Date of Incident	Claim Amount Requested	Status	Claim
Dev Menon	DEMO-POL-1001	Policyholder	Motor	05-Oct-2026	38000	Submitted	INS-1

Figure 6. Verified live result: Claim Type contains Motor AND Claim Amount Requested is 38000; Showing 1 of 1.

7. Automatic acknowledgement configuration

Save On_Claim_Submit_Workflow for Created records on Successful Form Submission. Its native sendmail action uses the submitted Email Address, includes the claim reference and policy number, and explains that a claims officer will contact the claimant at the preferred callback time. Blank optional email addresses are skipped; mail errors are caught and logged.

The screenshot displays the Zoho Creator interface for configuring an automatic acknowledgement workflow. On the left, a sidebar shows a 'Data Model Creation Failed' error message and a prompt to 'Try instructing Zia to 'Create a form to collect customer details''. The main workspace shows the 'On_Claim_Submit_Workflow' action configured to execute without a condition. A 'Deluge script' action is added, which sends an email. The script uses 'zoho.adminuserid' as the sender, 'input.Email_Address' as the recipient, and a subject line that includes the claim reference code. The email body is a personalized message starting with 'Dear ' followed by the claimant's first name and a line break followed by 'Your insurer'.

```
8 {
9   try
10  {
11    sendmail
12    [
13      from : zoho.adminuserid
14      to : input.Email_Address
15      subject : "Claim request acknowledged - " + input.Claim_Reference_Code
16      message : "Dear " + input.Claimant_Name.first_name + ",<br><br>Your insurer
17    ]
18  }
```

Figure 7. Saved native sendmail action showing zoho.adminuserid as sender, input.Email_Address as recipient and the claim reference in the subject. Zoho accepted the script and the saved action was reopened for verification.

Result. All thirteen basic field types, Sections A-D, mandatory/format rules, positive-amount and no-future-date validation, five saved sample records, combined report filtering and the automatic acknowledgement action are implemented. The required builder, live-preview and three-or-more-record screenshots are included.

Verification scope. Email configuration is saved and verified in Zoho Creator; inbox delivery has not been tested with a confirmed recipient. The laboratory form is accessed through the signed-in application; no public publishing or expanded user access was performed. Custom role permissions are not a requirement of the supplied 4a reference.
