

EXPERIMENT 04b

Insurance Claim Request Form — Advanced Fields

Aim. Extend Claim_Request_Form with seventeen native advanced fields for policy verification, repeating witness details, media, settlement computation and claim tracking.

Application: Insurance Claim Management

Reference: LC-04 — Insurance Claim — Advanced Fields 4b

Advanced type	Native form field
Decision Box	Is Third Party Involved
Rich Text	Claim Process Guidelines Display
URL	FIR Copy Online Link
Image	Damage Photo
Percent	Depreciation Percent
Currency	Estimated Repair Cost
Decimal	Policy Sum Insured Lakhs
Date-Time	Claim Submitted On
SubForm	Witness Details
Lookup	Policy Details Lookup
Signature	Claimant Digital Signature
File Upload	Repair Estimate Upload
Audio	Incident Voice Statement
Video	Accident Scene Video
Auto Number	Claim Reference ID (native Auto_Number)
Formula	Net Payable Amount
QR/Barcode	Claim Tracking QR Code

1. Native upload configuration

Extend the existing basic form with Sections E-H. Use native field controls rather than simulated HTML inputs. Repair Estimate Upload accepts PDF, JPG and PNG; the mandatory signature and third-party Decision Box complete the declaration.

Insurance Claim Management
Claim Request Form

Build Agent

Data Model Creation Failed

displayed by Full Name), Insurance type (dropdown: Health, Motor, Life, Property), Coverage Amount (currency INR), Start Date (date), End Date (date), Create an Insurance Claim form with Claim ID (auto number), Policy (required lookup to Policy displayed by Policy Number), Incident Date (date, required), Claim Date (date), Claim Type (dropdown: Health, Motor, Life, Property), Incident Description (multi line), Claim Amount (currency INR, required), Claim Status (dropdown: Submitted, Under Review, Approved, Rejected, Settled; default Submitted), Supporting Documents (file upload). Create list reports All Policyholders, All Policies, All Insurance Claims. Only forms and reports, no automatic approval decisions, notifications or sample data.

The Build Agent encountered persistent validation errors while creating the insurance claim data model. The auto-number fields (Policyholder ID, Claim ID) and some Policy form field properties could not be configured correctly. The changes were not applied. Please manually configure these forms and fields in the Zoho Creator application.

Figure 1. Actual Form Builder with PDF, JPG and PNG selected as allowed estimate formats.

Native witness and media fields

Use the native SubForm for witness name, phone and statement. Leave witnesses optional and enable a maximum of four entries. The adjoining fields are the native URL, Video and Audio types.

The screenshot displays the Zoho Creator Saved Form Builder interface for an "Insurance Claim Management Claim Request Form". The interface is divided into several sections:

- Left Panel:** Contains a "Data Model Creation Failed" message and a "Claim_Request_Form" tab. The message states: "The Build Agent encountered persistent validation errors while creating the insurance claim data model. The auto-number fields (Policyholder ID, Claim ID) and some Policy form field properties could not be configured correctly. The changes were not applied. Please manually configure these forms and fields in the Zoho Creator application." Below this, there is a prompt to "Try instructing Zia to 'Create a form to collect customer details'" and a note: "Responses are AI-generated. Review the information before proceeding."
- Form Layout:** The main area shows a form structure with fields for Name, Email, Address, Phone, Single Line, Multi Line, 123 Number, Date, and Time. A "Witness Details" subform is highlighted, containing three child fields: Witness Name, Witness Phone, and Witness Statement. Other fields include Policy Sum Insured Lakhs, Damage Photo, Repair Estimate Upload, Policy Coverage Type, Policy Valid Till, FIR Copy Online Link, Accident Scene Video, and Incident Voice Statement.
- Field Properties Panel:** Located on the right, it shows the "SubForm" field type. The "Limit maximum entries" checkbox is checked, and the value is set to 4. The "Description" field is empty, and the "Show" dropdown is set to "No description".

Figure 2. Saved Form Builder: Witness Details, its three child fields, FIR link, Video and Audio; the maximum-entry control is checked and set to 4.

Native settlement field group

Use Decision Box, Currency, Percent and Formula fields in Section G. The additional Policy Deductible currency input is used by the calculation. Retain the mandatory signature and submission timestamp in Section H.

The screenshot displays the Zoho Creator interface for an 'Insurance Claim Management' application. The main form, titled 'Claim Request Form', is divided into sections G and H. Section G, 'Settlement Calculation', includes fields for 'FIR Copy Online Link', 'Accident Scene Video', 'Incident Voice Statement', 'Is Third Party Involved' (a decision box), 'Estimated Repair Cost', 'Depreciation Percent' (a percent field with a 0-50 restriction), 'Policy Deductible' (a currency field), and 'Net Payable Amount' (a formula field). Section H, 'Guidelines, Signature and Tracking', includes 'Claim Process Guidelines Display', 'Claimant Digital Signature' (a mandatory signature field), and 'Claim Submitted On' (a timestamp field). A 'Field Properties' panel on the right shows the configuration for the 'Depreciation Percent' field, including its name, link name, validation rules (Mandatory, No duplicate values), initial value (0), max digits (10), and decimal points (2). A 'Data Model Creation Failed' message is visible on the left, indicating persistent validation errors. The bottom of the interface shows a trial expiration notice and a 'Done' button.

Figure 3. Actual advanced field group. The 0-50 depreciation restriction is enforced in the saved validation workflow, rather than a maximum-digit setting.

2. Policy lookup in action

Select DEMO-POL-1001 from the master Policy form. The user-input workflow copies policy number, insurance type, coverage amount divided by 100,000, and end date. The copied coverage fields are disabled for editing.

The screenshot displays the 'Insurance Claim Management' application interface. The left sidebar contains a navigation menu with options like Policyholders, Policies, Insurance Claims, Requests, Claim Request Form, Claim Request Report, All Claims List, Claims Spreadsheet, Claim Status Kanban, Incident Date Calendar, Claimant Location Map, Claim Activity Timeline, ClaimType By ClaimantType Pivot, and Claims_Command_Center_Page. The main area shows the 'Claim Request Form' with several sections: 'Supporting Documents Available' (a dropdown menu), 'Incident Description' (a text area), 'D. Scheduling and Declaration' (containing 'Preferred Callback Time' and a 'Declaration Of Authenticity' checkbox), 'E. Policy and Evidence' (containing 'Policy Details Lookup' with 'DEMO-POL-1001' selected, 'Policy Sum Insured Lakhs' set to 5.00, 'Damage Photo' and 'Repair Estimate Upload' buttons, 'Policy Coverage Type' set to Motor, and 'Policy Valid Till' set to 31-Dec-2026), and 'F. Witness and Media' (containing 'Witness Details'). The top bar shows 'Insurance Claim Management' and 'Trial expires in 14 days'.

Figure 4. Verified live lookup: Motor coverage, 5.00 lakhs and validity through 31-Dec-2026. Grey inputs are read-only.

3. Lookup workflow

Save Autofill_Policy_Details for created or edited records on user input of Policy Details Lookup. Fetch the selected master policy by ID and fill the corresponding helper fields.

The screenshot displays the Zia Build Agent interface for an "Insurance Claim Management" application, specifically the "Autofill_Policy_Details" workflow. On the left, the "Build Agent" panel shows a chat with the AI developer Zia, who asks, "Hi, I'm your AI developer. What would you like me to build today?". Below the chat, a prompt box contains the instruction: "Try instructing Zia to 'Create a form to collect customer details'".

The main area is the "Deluge Script" editor, which shows a script for the "Autofill_Policy_Details" action. The script is as follows:

```
1 if(input.Policy_Details_Lookup != null)
2 {
3   policy_record = Policy[ID == input.Policy_Details_Lookup];
4   input.Policy_Number = policy_record.Policy_Number;
5   input.Policy_Coverage_Type = policy_record.Insurance_Type;
6   input.Policy_Sum_Insured_Lakhs = policy_record.Coverage_Amount / 100000;
7   input.Policy_Valid_Till = policy_record.End_Date;
8 }
9 disable Policy_Coverage_Type;
10 disable Policy_Sum_Insured_Lakhs;
11 disable Policy_Valid_Till;
```

The script is executed within the "Deluge" action, which is part of the "Claim Request Form" workflow. The "Deluge" panel on the left lists various actions and client functions, including "Condition", "Data Access", and "Client Functions".

At the bottom of the interface, there is a status bar indicating "Trial expires in 14 days" and a "Get started faster!" button.

Figure 5. Saved native Deluge action used by the working policy lookup.

4. Repeating witnesses and optional media

Witness Details contains name, phone and statement columns and permits zero to four rows. The URL field records an online FIR link. Native Audio and Video controls provide optional supporting evidence; video is configured for 60 seconds and 50 MB.

The screenshot displays the 'Insurance Claim Management' application interface. The left sidebar contains a menu with options like 'Policyholders', 'Policies', 'Insurance Claims', 'Requests', 'Claim Request Form', 'Claim Request Report', 'All Claims List', 'Claims Spreadsheet', 'Claim Status Kanban', 'Incident Date Calendar', 'Claimant Location Map', 'Claim Activity Timeline', 'ClaimType By ClaimantType Pivot', and 'Claims_Command_Center_Page'. The main content area is titled 'Claim Request Form' and includes the following sections:

- Damage Photo:** A 'Select Image' button with an upload icon.
- Repair Estimate Upload:** A 'Select File' button with an upload icon.
- Policy Coverage Type:** A text input field.
- Policy Valid Till:** A date input field with the placeholder 'dd-MMM-yyyy'.
- F. Witness and Media:**
 - Witness Details:** A table with three columns: 'Witness Name', 'Witness Phone', and 'Witness Statement'. It contains one row with a fictional name, the phone number '+1 201-555-0123', and an empty statement field. Below the table is a '+ Add New' link.
 - FIR Copy Online Link:** A text input field with the placeholder 'https://'.
 - Accident Scene Video:** A 'Select File' button with an upload icon and a video camera icon.
 - Incident Voice Statement:** A 'Select File' button with an upload icon and a microphone icon.
- G. Settlement Calculation:**
 - Is Third Party Involved:** A checkbox with a red asterisk indicating it is a required field.

Figure 6. Live witness row with fictional demonstration text and native media controls. This screenshot shows a form preview, not another submitted record.

5. Automatic settlement computation

Enter repair cost ₹38,000, depreciation 20% and deductible ₹1,000. The read-only formula computes $38,000 - (38,000 \times 20 / 100) - 1,000 = ₹29,400$. Validation restricts depreciation to 0–50 and rejects negative repair costs or deductibles.

The screenshot shows the 'Insurance Claim Management' application interface. The left sidebar contains navigation options: Policyholders, Policies, Insurance Claims, Requests (selected), Claim Request Form (selected), Claim Request Report, All Claims List, Claims Spreadsheet, Claim Status Kanban, Incident Date Calendar, Claimant Location Map, Claim Activity Timeline, ClaimType By ClaimantType Pivot, and Claims_Command_Center_Page. The main content area is titled 'Claim Request Form' and includes the following sections:

- FIR Copy Online Link:** A text input field containing 'https://'.
- Accident Scene Video:** A file selection button labeled 'Select File' with an upload icon.
- Incident Voice Statement:** A file selection button labeled 'Select File' with an upload icon.
- G. Settlement Calculation:**
 - ☐ Is Third Party Involved *
 - Estimated Repair Cost:** 38,000
 - Depreciation Percent:** 20
 - Policy Deductible:** 1,000
 - Net Payable Amount:** 29400.0000
- H. Guidelines, Signature and Tracking:**
 - Claim Process Guidelines Display:** A rich text editor showing the text: 'Keep all original bills and estimates. A surveyor will contact you within 48 hours. Do not repair the vehicle before inspection.'

Figure 7. Actual live recalculation to 29400.0000; values were entered through native controls.

6. Guidelines, signature and timestamp

Initialize the guidelines block and disable it for editing. Capture a fictional drawn signature for the laboratory sample. Claim Submitted On is initialized when the form opens; the saved successful-submission action now replaces it with the actual submission time for future new records.

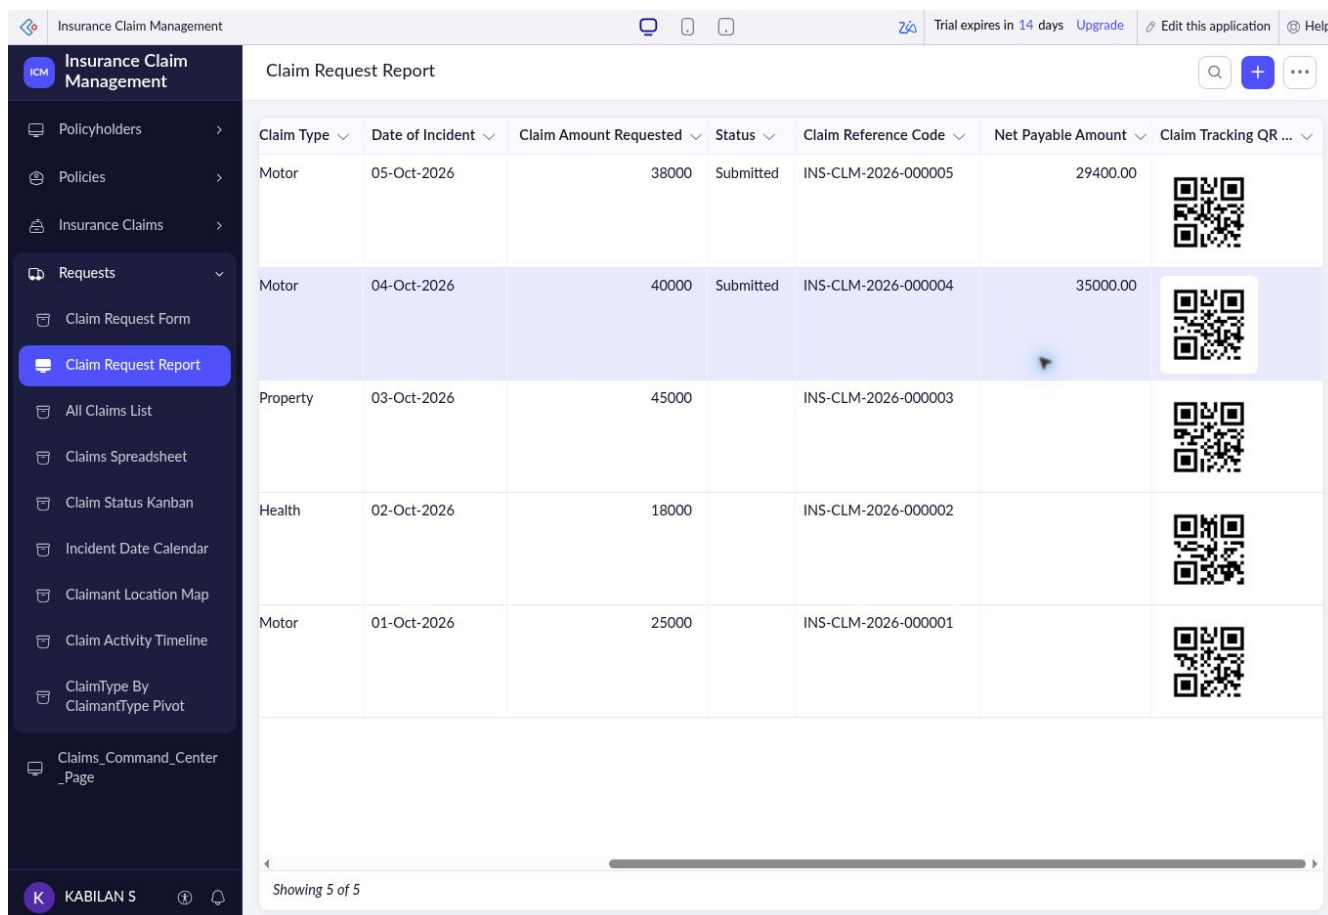

The screenshot displays the 'Insurance Claim Management' application interface. The top header shows the application name, user profile (KABILAN S), and navigation links like 'Trial expires in 14 days', 'Upgrade', 'Edit this application', and 'Help'. The left sidebar lists various navigation items, with 'Claim Request Form' highlighted. The main content area is titled 'Claim Request Form' and contains three sections:

- H. Guidelines, Signature and Tracking:** This section includes a 'Claim Process Guidelines Display' with a rich text editor toolbar (Bold, Italic, Underline, Font Size 10, Color, Background Color, Link) and a text area containing the instruction: 'Keep all original bills and estimates. A surveyor will contact you within 48 hours. Do not repair the vehicle before inspection.'
- Claimant Digital Signature:** This section features a 'Draw your signature' area with a blue cursor and a '[Clear]' button.
- Claim Submitted On:** A timestamp field showing '06-Oct-2026 20:30:24'.
- Claim Reference Code:** An empty text input field.
- I. Processing Status:** This section contains two dropdown menus: 'Status' (set to 'Submitted') and 'Investigation Status' (set to 'Not Started').

Figure 8. Live read-only guidance, mandatory signature control and disabled timestamp. The drawing is a fictional test mark.

7. Two saved advanced sample claims

Open Claim Request Report and scroll to the tracking and calculation columns. The native Auto Number supplies a sequence, while the reference formula supplies the prefix, submission year and six-digit sequence. The QR field encodes that full reference.

The screenshot shows the 'Insurance Claim Management' application interface. The main content area displays a 'Claim Request Report' table with the following data:

Claim Type	Date of Incident	Claim Amount Requested	Status	Claim Reference Code	Net Payable Amount	Claim Tracking QR ...
Motor	05-Oct-2026	38000	Submitted	INS-CLM-2026-000005	29400.00	
Motor	04-Oct-2026	40000	Submitted	INS-CLM-2026-000004	35000.00	
Property	03-Oct-2026	45000		INS-CLM-2026-000003		
Health	02-Oct-2026	18000		INS-CLM-2026-000002		
Motor	01-Oct-2026	25000		INS-CLM-2026-000001		

The interface includes a sidebar with navigation options: Policyholders, Policies, Insurance Claims, Requests (selected), Claim Request Form, Claim Request Report (highlighted), All Claims List, Claims Spreadsheet, Claim Status Kanban, Incident Date Calendar, Claimant Location Map, Claim Activity Timeline, ClaimType By ClaimantType Pivot, and Claims_Command_Center_Page. The bottom status bar shows 'KABILAN S' and 'Showing 5 of 5'.

Figure 9. Two saved advanced samples: Dev Menon, reference 000005 and net ₹29,400; Ananya Rao, reference 000004 and net ₹35,000. All five QR images in this actual screenshot were independently decoded with zxing-cpp and matched references INS-CLM-2026-000001 through INS-CLM-2026-000005.

Automatic year and reference formatting

Use the year of Claim Submitted On instead of a fixed year string. A current-time fallback handles records without a submission timestamp. Concatenate INS-CLM-, the year, a hyphen and a six-digit padded native Auto Number.

Data Model Creation Failed

displayed by Full Name), Insurance Type (dropdown: Health, Motor, Life, Property), Coverage Amount (currency INR), Start Date (date), End Date (date), Create an Insurance Claim form with Claim ID (auto number), Policy (required lookup to Policy displayed by Policy Number), Incident Date (date, required), Claim Date (date), Claim Type (dropdown: Health, Motor, Life, Property), Incident Description (multi line), Claim Amount (currency INR, required), Claim Status (dropdown: Submitted, Under Review, Approved, Rejected, Settled; default Submitted), Supporting Documents (file upload). Create list reports All Policyholders, All Policies, All Insurance Claims. Only forms and reports, no automatic approval decisions, notifications or sample data.

The Build Agent encountered persistent validation errors while creating the insurance claim data model. The auto-number fields (Policyholder ID, Claim ID) and some Policy form field properties could not be configured correctly. The changes were not applied. Please manually configure these forms and fields in the Zoho Creator application.

Figure 10. Saved formula reopened in Form Builder. The existing sample references remain 2026 because their submission year is 2026; a future-year execution test is not claimed.

Saved optional media

Attach the existing fictional JPG fixture, repair-estimate PDF and short audio/video test fixtures to Dev Menon's sample record. Save the update and reopen it to verify the files remain attached.

The screenshot displays the 'Insurance Claim Management' (ICM) application interface. The left sidebar contains a navigation menu with options: Policyholders, Policies, Insurance Claims, Requests (expanded), Claim Request Form, Claim Request Report (highlighted), All Claims List, Claims Spreadsheet, Claim Status Kanban, Incident Date Calendar, Claimant Location Map, Claim Activity Timeline, ClaimType By ClaimantType Pivot, ClaimType_Distribution_Chart, and ClaimType_Amount_Summary. The main content area is titled 'Claim Request Form' and shows a 'Policy Valid Till' of '31-Dec-2026'. Under the 'F. Witness and Media' section, the 'Witness Details' table lists 'Demo Witness Two' with a phone number '+1 201-555-0123' and a statement 'Fictional lab incident observed near the branch counter.' Below this is a '+ Add New' button. The 'FIR Copy Online Link' is 'https://'. The 'Accident Scene Video' is 'lab-video-test.mp4' and the 'Incident Voice Statement' is 'lab-audio-test.mp3'. Under the 'G. Settlement Calculation' section, the 'Is Third Party Involved' checkbox is checked, and the 'Estimated Repair Cost' is '38,000', 'Depreciation Percent' is '20', and 'Policy Deductible' is '1,000'. The bottom of the sidebar shows the user 'KABILAN S'.

Witness Name	Witness Phone	Witness Statement
Demo Witness Two	+1 201-555-0123	Fictional lab incident observed near the branch counter.

Field	Value
FIR Copy Online Link	https://
Accident Scene Video	lab-video-test.mp4
Incident Voice Statement	lab-audio-test.mp3
Is Third Party Involved *	☒
Estimated Repair Cost	38,000
Depreciation Percent	20
Policy Deductible	1,000

Figure 11. Reopened saved record with witness statement, lab-video-test.mp4 and lab-audio-test.mp3. Both media fixtures are two seconds long; the audio is a synthetic test tone and the video displays LAB TEST ONLY. These are upload tests, not a human voice statement or real accident footage.

Image format validation

Extend `Validate_Claim_Request` with a JPG/PNG-only image-extension check. Extract the image source from the native Image field markup, compare its extension with the allowed list, and cancel submission for other extensions. Preserve the existing amount, date, depreciation and non-negative-cost validation.

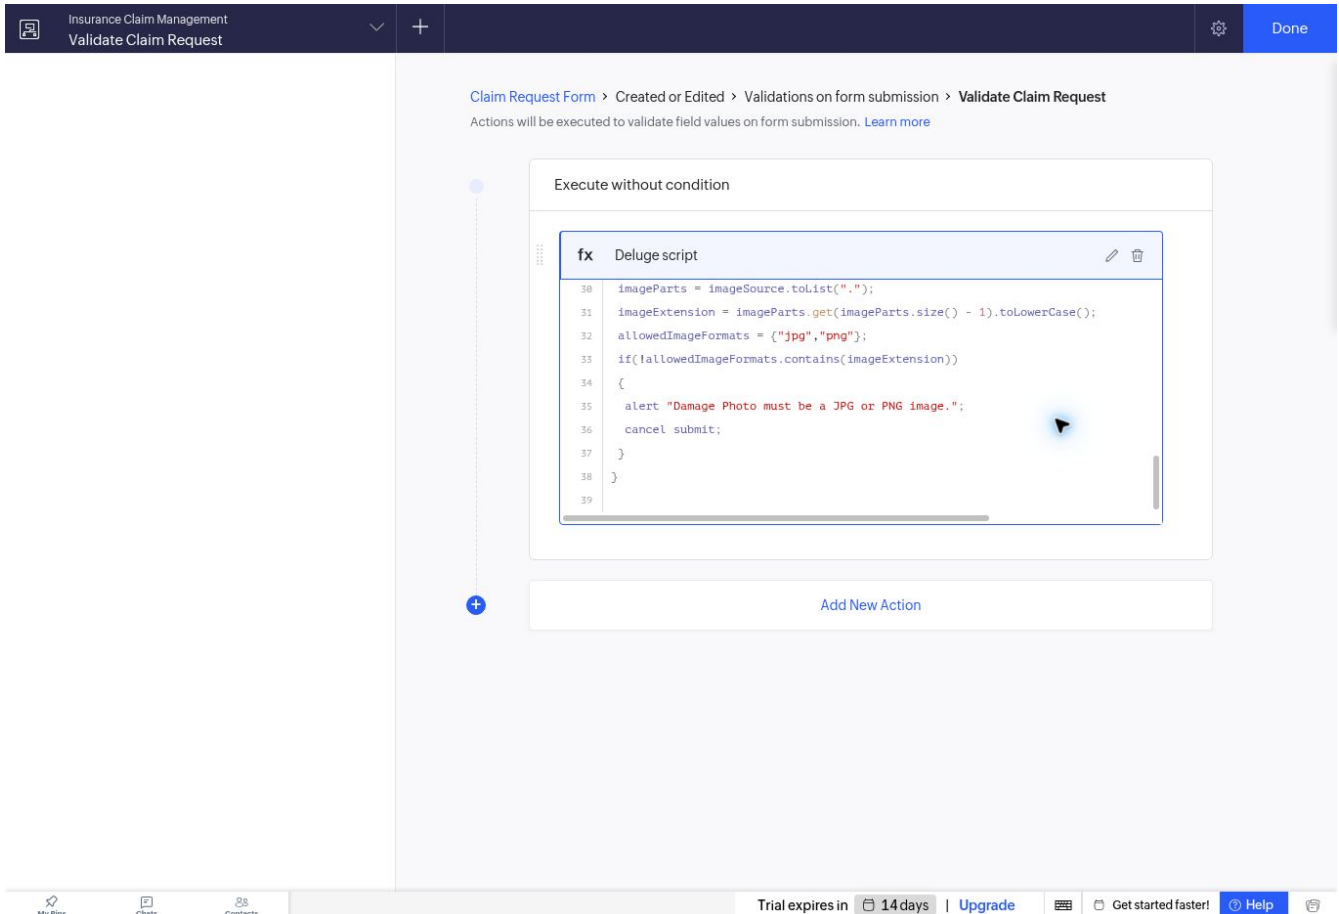

Figure 12. Saved native image validation. Zoho accepted the script and the valid JPG sample update passed. A rejected-image submission test has not been completed.

Verified result. All seventeen native advanced types are present. Policy autofill, live formula recalculation, mandatory declaration controls, four-row witness limit, accepted estimate formats, saved JPG/audio/video attachments, two saved advanced claims, automatic-year reference expression and independent QR decoding are demonstrated.

Remaining differences from the reference. The custom 2 MB Damage Photo and 5 MB Repair Estimate limits are not enforced. The available native field-property panels expose no custom size controls, and Deluge file-size methods cannot directly inspect Creator input fields. Implementing exact custom limits needs a separately verified upload integration. The saved image-format guard has a positive JPG test but no negative submission test. This record does not claim full compliance with those outstanding checks.
